Timed Applications ..... 2

**Web Demo**

Develop pages on the site to allow anyone to login, modify (maybe), add users, groups, memberships, view stats, create pages, content...

**Web Signup For New Sites**

Develop pages on the site to allow a new customer to choose template and begin loading data for their new site. New pricing would be less than current build from scratch.

**Web Support**

Allow the user to report errors or upgrades thru web support.

**Discount For Referrals**

Discount current client's future purchases when they refer a new client. Maybe 10%?

**Dynamic Content**

Allow the user to create pages by using a common page with a unique QueryString.  
Allow the user to create pages by copying standard template files that call a function passing the filename.  
Allow the user to the date and time range for content to be displayed on the page.

**Photo Albums**

Add thumbnail file  
Allow the user to choose page format (2, 3, 4 photos across)  
Use popup and << or >> scroll buttons using Java.

## **Security**

Finish User config.

Finish Group membership.

Logging/Statistics

Develop more reports (with filtering). Allow user to click deeper into details to see a single session's activity.

Develop Logging and security to view activity.

## **Mailing Lists**

Allow visitors to add/remove themselves from mailing lists.

Allow user to add/disable/change/delete membership.

Allow user to view membership report (maybe).

Allow user to view log of emails sent.

## **Timed Applications**

Develop based on Session\_Start, redirecting to timed page (with Loading... screen), then to requested page.
